SUMMARY

Game developer & designer experienced in Godot , Unity engines , GDScript , C# languages and using Antigravity IDE. Built over 6 games including 1st place jam game. Strong in gameplay systems and narrative design , used to work in teams of 2-5 under tight deadlines. Currently seeking a role in game studios/companies as a game developer or designer.

EXPERIENCE

Dimensions game studio, *Game Developer Intern*

01/2026 – 03/2026

Amman , Jordan

- Built a Unity game jam prototype with a studio employee that beat 7+ teams and became the studio's full 3D mobile game, by designing the player movement, camera, and puzzle system.
- Completed 30+ Jira tasks in 3 months as a full team member, by working through the studio's scrum workflow on Jira and pushing to GitHub repo.
- Delivered the passenger pickup/drop-off, obstacles, sidewalk prop spawning, and main screen UI logic in C#. Learned design patterns , refactoring , OOP terms in depth.
- Created the game's "after continue" effect , by building a tween-based scene with matching SFX that got positive feedback.

EDUCATION

Bachelor in Software Engineering, *AL-Balqa Applied University*

2026

Salt , Jordan

- Graduated with a GPA of 3.37/4 (Very Good).

AWARDS

1st Place Winner

2025

"Airport Security" game won among all entries in a competitive 36-hour Godot game jam. Built complete interactive logic, dialogue interrogation systems, and suspect deduction mechanics in a high-intensity collaborative sprint using Godot and GDScript.

Cultural Impact Award

2025

Honored with the Cultural Impact Award in SheJam for "Ashes Of Hope" an emotional, narrative-rich visual novel developed in 10 days using Godot and GDScript , exploring post-war rebuilding, family bonds, and resilience through interactive storytelling.

PROJECTS

Ujleek

03/2026 – 05/2026

- Led a team of 5 to build an Arabic web platform for Gen Z with 5 disorder pages, each with a 10-question screening quiz. I planned the site structure and content, ran Scrum sprints in Jira, and trained teammates on GitHub and Jira.
- Built a 3D Unity game about overcoming anxiety on my own in about 6 weeks.
- I made 3 playable rooms, each one containing a puzzle and CBT technique. As well as building 3 core systems anxiety meter, breathing , and a limited medicine system.
- Fixed an exposed API key in the chatbot by building a backend that keeps the key in an environment variable, deployed on Netlify and Vercel.
- Documented 10+ documents including GDD throughout the project.
